## Introduction

HECODEX is a new innovation on blockchain technology, which aims to offer scalable decentralization cryptocurrency exchange, a new breakthrough gateway to provide an ability that offers yield powered by block rewards of major Proof-of-Stake blockchains.

HECODEX offers a protected savings product as DeFi's benchmark interest rate, determined by highest demand. Ultimately, we strongly believed HECODEX to become the further of innovation for passive income on the blockchain.

# The Problem

There are currently a lot of scam tokens and coins in the crypto world. All these tokens and coins are now just useless collections in the wallet because we can't sell them because the liquidity on the coins is no longer there

# The Solution

We are not to be mainstream, HE CODEX create an innovation for everyone. We will make a useful tool which allows everyone to convert useless tokens into valuable rewards.

On the condition that the token is only tokens getting rugged, team project pull-out LP and hidden mint function on tokens, not a dusting token that appears on its own in the wallet.

We will turn these useless tokens and coins into useful value for our community. With the creation of HE CODUST, it is possible to exchange useless coins and tokens into HE CODEX/BUSD/BNB. We also have a mission to build a decentralized network with an anti-rug-pull system

# The Vision

Our goal vision to create a secure ecosystem in the blockchain world for all investors

## Hecotools

Reliable tools;hecoswap, hecopool, hecowallet, and hecobridge

Ensuring safety for everyone is of utmost importance. Here we will continue to strive to provide the best service for everyone, especially for our community.

## Hecodust

Exchange useless tokens into valuable rewards

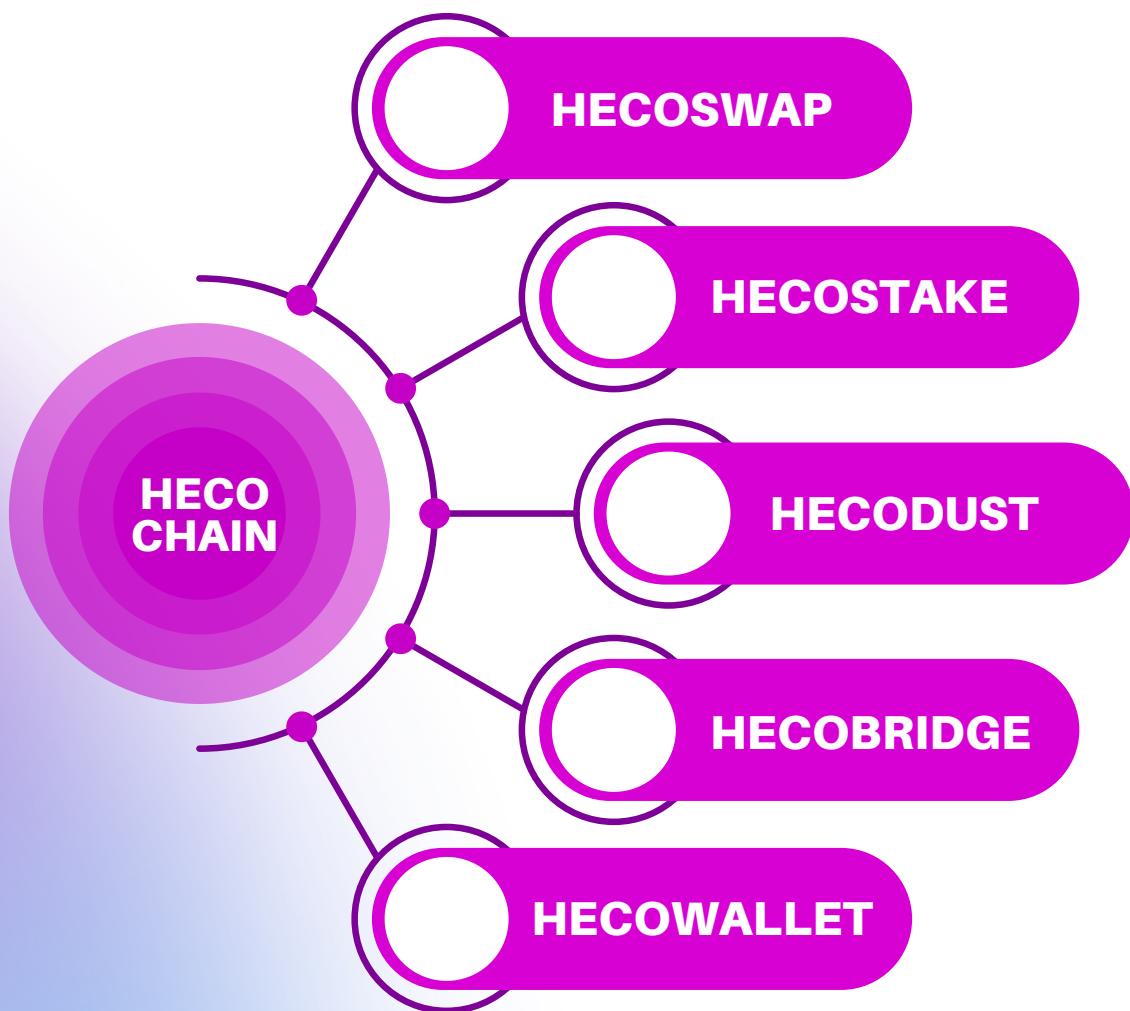

With the presence of hecotools, hecodust and hecochain, our hope is that the crypto world in the future will be even more advanced

## Hecochain

Decentralized network with anti-rugpull system

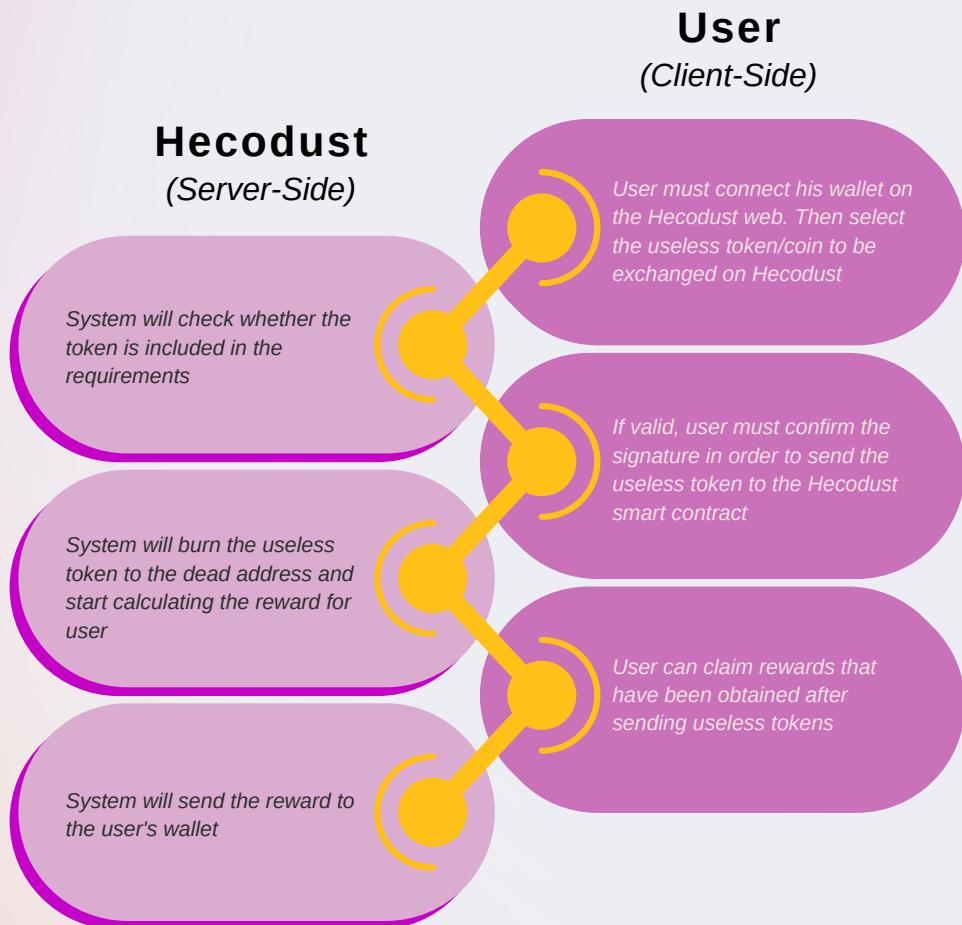

# Hecodex Network

Hecodex Network contains 5 main parts.

# Hecodust Mechanism

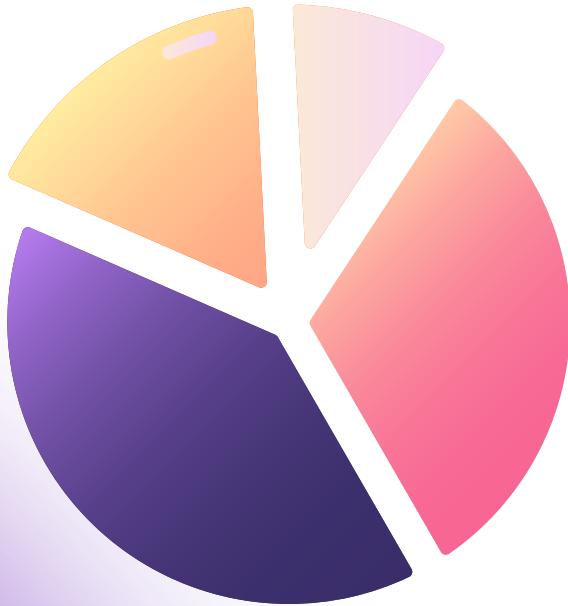

In this chapter we will explain the simple mechanism of Hecodust Systems

## Requirements for exchangeable tokens

1. Hold minimum 5000 HECODEX
2. Tokens launched with LP > 1 BNB
3. The maximum token held is 5% of the total supply
4. Not dusting tokens that appears in the wallet

# Supply & Tokenomics

**TOTAL SUPPLY**

**300,000,000**

**TOKEN ALLOCATION**

**75%** Liquidity Locked on  
PancakeSwap

**15%** Reward for Hecodust  
Locked on PinkSale

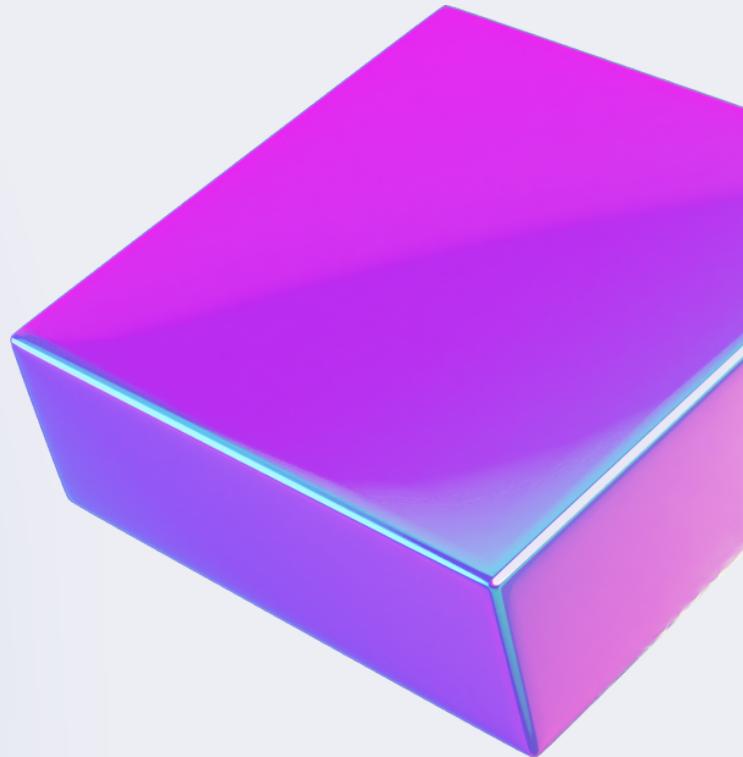

**5%** Additional LP and CEX Listings  
Locked on PinkSale

**5%** Team and Partnership  
Locked on PinkSale
